DETAILED ACTION

Claims 16 and 19-21 are under consideration in this application.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 16 and 19-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Haginoya et al. (Heterocycles, 63(7), 2004, 1555-1561).

Haginoya et al. disclose the instant process. Note scheme 3 therein. The starting material compound 17 therein differs only in having a tert-butoxycarbonyl group rather than applicants' methyl group attached to the nitrogen. As here, a piperidone is reacted with sulfur and a cyanamide to form a tetrahydrothiazolo[5,4-c]pyridine ring followed by bromination and subsequent reaction with alkyllithium and carbon dioxide. The reaction of a specific piperidone with sulfur and cyanamide does not render the process step itself patentable, anew; In re Albertson, 141 USPQ 730, which was specifically reaffirmed on the last page of In re Kuehl, 177 USPQ 250.

One having ordinary skill in the art would have been motivated to employ the process of the prior art with the expectation of obtaining the desired product, because he would have expected the analogous starting materials to react similarly. It would be well within the level of the skilled artisan to replace the tert-butoxycarbonyl group with methyl and expect the resulting final product. Note intermediates (2) and (3) on page 1555 of Haginoya et al. It has been held that application of an old process to a new and analogous material to obtain a result consistent with the teachings of the art would have been obvious to one having ordinary skill.

Conclusion

No claim is allowed.
